PACKAGES AND OPTIONS

EXTERIOR

The 1966 Shelby GT350 built upon the foundation established by the '65 model with improved functionality and styling changes designed to differentiate it from lesser Mustangs. Notably, plexiglass quarter windows improved rearward visibility and reduced weight while rear scoops ducted air to the Galaxie rear drum brakes. More colors and wheel choices were offered, which gave the car wider appeal. We have captured the aesthetics of the '66 GT350 while making it perform better than anything Carroll Shelby could have imagined back then.

① COLOR

The Revology paint process consists of an epoxy primer, urethane primer, basecoat, and clearcoat. We use exclusively Glasurit automotive paint finishes for the ultimate in appearance and durability

② LeMANS STRIPES

LeMans stripes were an option on the 1966 Shelby GTs, although most cars had them. They were installed both at the factory and by dealers. The stripes that run over the car from the front valance, stone deflector, grille support, hood, cowl, roof, trunk filler panel, decklid, taillamp panel, to the rear valance are painted and triple clear coated, leaving no perceptible transition between stripe and body color. The side stripes are made from high quality 3M vinyl

SAFETY AND SECURITY

Modern vehicles are designed to meet passive safety standards that did not exist when the original Mustang entered the market. Although it is impossible to meet current safety standards with a vehicle based on a 1960s design, Revology endeavors to enhance safety as much as possible within the constraints of the vehicle platform. Standard safety features include driver and passenger three-point seat belts, a dual-circuit braking system, a collapsible steering column shaft, a fuel pump inertia switch, and a 16 gauge steel trunk floor, none of which were available on the original Mustang. Theft protection is enhanced via a rolling code encrypted ignition switch. Optional safety features are listed below.

14 RESTRAINT SYSTEMS

- | | | | |
|--------------------------|--|----|-----|
| <input type="checkbox"/> | FRONT SEAT HEAD RESTRAINTS | \$ | 800 |
| | <i>Adjustable front seat head restraints, covered in matching leather or vinyl</i> | | |

FUNCTIONAL

Revology vehicles are designed to be fast, reliable, comfortable, and above all, fun to drive. We have worked very hard to develop a vehicle that artfully balances acceleration, braking, steering, and ride quality. Although they are designed for street use, much like a modern performance car they are suitable for track use with minimal modifications.

15 EXHAUST

PACKAGES AND OPTIONS

EXTERIOR

The "H" in GT350H stands for "Hertz". In 1966, Ford and Shelby sold 1,000 Shelby GTs designated as GT350H models to Hertz for use in its rental fleet. The most popular color combination was Raven Black with gold stripes (the Hertz logo colors) but the GT350H was available in the other Shelby colors as well, both with and without LeMans stripes. The early cars had manual transmissions, but after Hertz had to replace a high percentage of clutches, the company switched to automatics. The Revology GT350H package includes gold vinyl side stripes and 17x8 Magnum 500 wheels with Hertz center caps.

② **LeMANS STRIPES**

1,000 cars was an extremely large order for Shelby American at the time, and the company struggled to meet the production target. Hertz also requested changes during the program based on its field experience, which further complicated matters for Shelby. As a result, a wide range of color and stripe combinations were produced. Black with gold stripes is the iconic GT350H color combination, and the most common. On the Revology GT350H, the stripes that run over the car from the front valance, stone deflector, grille support, hood, cowl, roof, trunk filler panel, decklid, taillamp panel, to the rear valance are painted and triple clear coated, leaving no perceptible transition between stripe and body color. SAFETY AND SECURITY

Modern vehicles are designed to meet passive safety standards that did not exist when the original Mustang entered the market. Although it is impossible to meet current safety standards with a vehicle based on a 1960s design, Revology endeavors to enhance safety as much as possible within the constraints of the vehicle platform. Standard safety features include driver and passenger three-point seat belts, a dual-circuit braking system, a collapsible steering column shaft, a fuel pump inertia switch, and a 16 gauge steel trunk floor, none of which were available on the original Mustang. Theft protection is enhanced via a rolling code encrypted ignition switch. Optional safety features are listed below.

- ⑭ **RESTRAINT SYSTEMS**
- FRONT SEAT HEAD RESTRAINTS** \$ 800
Adjustable front seat head restraints, covered in matching leather or vinyl

FUNCTIONAL

Revology vehicles are designed to be fast, reliable, comfortable, and above all, fun to drive. We have worked very hard to develop a vehicle that artfully balances acceleration, braking, steering, and ride quality. Although they are designed for street use, much like a modern performance car they are suitable for track use with minimal modifications.
